Carbon footprint of a product is the sum of greenhouse gas (GHG) emissions and GHG removals in a product system, expressed as CO₂ equivalents and based on the methodology of lifecycle assessment. The disclosure of carbon footprint data places positive effects on guiding green consumption, promoting green production and mitigating climate change. The carbon footprint data expressed in this statement is scientifically modeled, calculated and verified according to carbon footprint assessment standards published by the Guangdong-hong kong-macao Greater Bay Area (Shenzhen-Hong Kong) Measure Test Certification Development Promotion Alliance within a set of specific limits. The data only demonstrates that the responsible party is meeting its responsibility and commitment to combat climate change. Drawing direct comparisons between carbon footprint data from similar products and data from the certificate is not scientifically sound and it is inappropriate to draw conclusions of superiority or inferiority based on such comparisons. Any party or anyone shall not use the carbon footprint data expressed in this statement in a misleading manner and shall actively support the products with verified carbon footprint data disclosure and implement green consumption practices.
